

## ***Classic Ultra***

*This is No Ordinary Lead-Free Solder!*

This is Classic Ultra from Fry Technology. The only lead-free solder that works better than 60/40!

After years of research and experimenting with innumerable alloys, Fry's metallurgist created just the right combination of metal and trace elements to bring to you a solder like no other – Classic Ultra Lead-Free Solder.

Try it and you'll see for yourself. As soon as your iron touches the solder, you'll know you're working with something different. Compare this solder to any available...we're confident you'll find it gives you the brightest joints and perfect solder lines – with no imperfections! And don't forget, it's lead-free!

Use Classic Ultra for all your stained glass projects. It is especially good for jewelry and other projects that require a lead-free material. The small diameter (.062) can be used with Fry's Symphony Ultra Lead-Free Came.

Classic Ultra melts at 440-490°F and is available in .062 and .125 diameter on 1-lb. spools. (It is important to know that other alloys on the soldering iron will effect the performance of Classic Ultra. It is necessary, therefore, to thoroughly clean the tip before you begin.)

Order Classic Ultra from your distributor of fine stained glass products.

*Try Classic Ultra one time and you ll be hooked!*
